Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. It was well packaged and arrived in excellent shape. It comes with a battery nice. And there is a small, but seemingly complete users manual that comes with it as well as ads and registration stuff. I don't own a lot of pedals this makes two, but it seems well made and sturdy. I purchased this with the idea of playing around with rhythm, bass and lead tracks without the cumbersome method of actually using a recorder, etc. As some reviewers have mentioned, it's worth reading the little manual. I can lay down a rhythm loop and then come back and overdub the bass. Then I can drop a lead line what I want to learn how to do play some lead on top of that not recording the lead, but just trying different things. Setting up to use it takes seconds, so it's really convenient. I also like having some privacy to mutilate lead lines without embarrassment.

It took a little practice about 20 minutes of messing around to get down the timing so the loop is seamless or at least close enough that I don't notice. It's fun. I started playing with it and a few moments later I realized an hour had already passed. I think it's a winner. Being a retired 60s, 70s rock n roller, I wanted to play again, in my spare time and thought the RC2 would provide me a rhythm, chord track to do so. However, after attempting to learn how to use the RC2, I remain frustrated. My 13 year old grandson even tried to help, following the manual which you have to hold close to your face to read and it's not just my eyesight, but we were unsuccessful. My biggest issue is with the guide drum patterns. There are 33 of them and no indicator as to which one you are on. Beyond that, I still haven't figured out how to save a guide pattern to one of the 11 Phrase Select locations. I emailed the tech support people asking for help and never did hear back from them. In summary, it's just possible that the manual does not coordinate with my brain. I will admit that I'm not cutting edge technically savvy, but I'm not technically ignorant either. I can operate my laptop, digital camera, cell phone, and GPS. This however, is stumping me. I will keep at it, as I still have high hopes for what I think it will do for my hopes of getting back to playing. Please try again later.

Paul C. 4.0 out of 5 stars I really needed it for something specific then shelved it. Now, I'll be the first to admit, intuitiveness is subjective and as an older musician, perhaps I don't find things as intuitive as some of the young guns out there. But, I would use it a lot more if it were more straight forward. That said, it is built to Boss standards that I rely on when I purchase a Boss product. Doesn't feel like some cheap POS that will stop working because it hit the floor. You could argue that these devices aren't made for that, but, let's get real, if you are playing regularly, then you're going to be hauling your gear all over and this device, like any other, could be dropped, rolled over, stepped on, etc at any point. You don't need a problem at a show last minute because of some boutique quality device losing a knob or something because someone sneezed too closely to it. No, this is another solid solution from Boss. Let's face it, solid state memory is very inexpensive right now, shouldn't cost this much for a relatively basic looper. Please try again later. Please try again later. E. Guzman 5.0 out of 5 stars For does musicians how have the burn of composing the songs for their bands or composing at all this is the most comfortable way of doing it, is fast to record a phrase then overdubbing it, and again, and again until you have a full and rich song.

CerealLOVER 5.0 out of 5 stars He mentioned that when you find a drum beat you like and accidentally go forward to another beat that you CAN'T go back to the previous one. He's wrong you CAN go back. I feel like I can't play without this now. The features There are a lot of drums beats to choose from and they can easily be changed into a different tempo if they are not as fast or as slow as you would like them to be. If you want to record clean sounds with the pedal then that's ok. But if you want to use distorted guitar sounds you need a

distortion pedal to go before the pedal or else the drums will distort. So if you plan on buying this pedal to record rock songs you might want to invest in a distortion pedal. This pedal is the closest thing i have to having someone else to play with. Its also a great tool for learning songs that have more than one guitar. You just gotta record each guitar but that doesnt matter because its a whole lot of fun anyway. The first couple of minutes with this pedal might seem confusing and maybe frustrating for others. But after about 20 minutes or so you really start to get the hang of it and what it can do. The only problem ive had with this pedal is that right from the start the AUX input didnt work,forgivable this time because a lot of my amps and stuff already have AUX inputs. I love this pedal and so will you. I rarely ever play with out it now.Please try again later. Please try again later. Danny Hill 4.0 out of 5 stars It does take some getting used to, but with practice and patience you can be your own living room band or great stage enhancement. Its a must for hot lickers wanting to work on there scales, or studio practice on multilayering tracts. There could have been some user friendly options. The drum tracts only progress forward when choosing which one you want so if you skip over one you have to tap through the other 40 to get back to the one you wanted.

It would have better application if you could back to back record tracts to build in a bridge thus completing a fully recorded song, however this can be done on other recording devices looped into this unit. Once I master this Im going for the dual pedal RC3. Will the madness stop. For the price you cant beat this loop station.Please try again later. Please try again later. Kevin D 5.0 out of 5 stars Please try again later. Please try again later. Ryan Mentock 5.0 out of 5 stars He decided he wouldnt use it that often since he played drums mostly, so he wanted his half of the money back. I couldnt afford it in college at the time and we had to return it. I spent the next 4 years wishing I had it back, and finally bought it again about 9 months ago. I love it even more now and would buy another one if this one broke. Takes about 5 minutes to figure out the basics and get your first jam down, then maybe another two weeks to master it, but youll enjoy it the whole time.Please try again later. Please try again later.Its great to hook a microphone to and have fun making up crazy tracks. I hooked up my electric guitar laid down a track, than plugged in my microphone and put it near the sound hole on my acustic,than sang into the microphone, and had so much fun. It will take at least 1015 minutes to get down all the details about the pedal but the learning curve is very small and an overall great buy!!! you gotta get one of these!! stop putting it off. Could be used live,if you are a one person band. Just lay down some pre recorded tracks and play them when you are ready or lay down track by track live and such. If you wanted to get really specific there are addons that will make it easier for live performances.Please try again later. Please try again later. Sailorman 4.0 out of 5 stars Basic use is fairly simple and straightforward but there is clearly a significant learning curve in order to use this loop machine to its full capabilities.
