Course Outline

Linear Algebra is widely used in physics, chemistry, biology, computer science, engineering, economics, finance, insurance, and business. This course covers linear independence, vector space, basis, dimension, inverse matrix, determinant, linear transformations, rank, eigenvalue, eigenvector, orthogonal matrix, diagonalization, LU-decomposition, QR-decomposition and singular value decomposition. The goal of this course is to learn how to solve systems of linear equations with practical applications in mind.

Textbook

Textbook
"Contemporary Linear Algebra".
by H. Anton and R.C. Busby. John Wiley & Sons, Inc.

卷二

Evaluation
Midterm (40%), Final (40%), Homework/Quiz(10%), Class Attendance(10%)
Students who miss either midterm or final exam will get the final grade F.
Course grades will be determined by a relative scale based only on scores of first-time takers.

For repeaters, the possible highest course grade is B+.

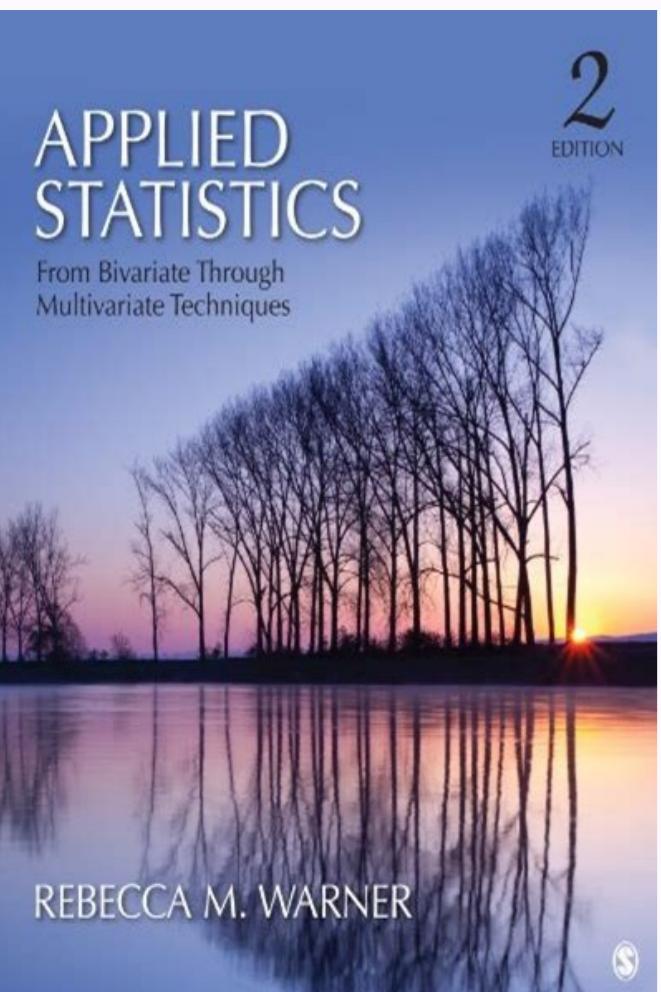

Homework submission

You do not have to hand in your homework and instead you practice with n-th week's homework to prepare for (n+1)-st week's quiz.

homework to prepare for (n+1)-st week's quiz.

Discussion Section

There will be a one-hour discussion section each week except for the first and second week. Each section is run by a TA and accommodates about 30 persons.

Multivariate statistik.
